

Integrated, Intuitive, Effective Booksaurus.com

Simplifying Used Books.

[What It Is]

Booksaurus has been created by Carleton Technologies to make it easy to buy and sell used books. The genius of Booksaurus is that it manages the used book buy back process right from BookwarePOS; it is fully integrated with your existing cashier set-up. Once the list of books you want to buy back is entered into the Booksaurus database, your cashiers have real-time access to that list. Cashiers will be able to buy back the books you want, and the database will track which books and how many are bought, automatically updating the list as books are purchased.

Booksaurus is also fully integrated with Bookware3000's Course Planning, Requisitioning and Receiving applications, so that, from start to finish, the used book buy back process can be completed as part of the normal store operation routines. Booksaurus's transparent interaction with all aspects of the Bookware3000 Bookstore Management Solution makes it the most effective way to increase your used book sales and purchases.

Increase Your Used Book Buying Power

[Why Sign Up]

Used books are an important component of your textbook sales. Used books are always in demand, and the ability to supply your customers with a greater used book selection will lead to greater customer satisfaction. Put simply, signing up with Booksaurus will increase your used book buying power. Booksaurus can enable you to more efficiently buy back used books from your customers, and the more used books you can supply, the happier your used book buying customers will be. Most bookstores avoid buying back used books because of all the logistical problems involved. Booksaurus automatically maintains your order lists and automatically enters the used book data into Receiving. With Carleton Technologies' Booksaurus, it has never been easier to increase your used book sales and improve customer satisfaction.

Booksaurus.com

[How It Works]

The full integration of Booksaurus software with your Bookware3000 Bookstore Management Solution makes buying used books quick and easy. Every time textbooks are requested through the Course Planning application, a used book list will be generated based on the used book buy percentage for that course. Once this list is uploaded to the Booksaurus database, your cashiers have access to it and can begin buying back the titles you have requested.

BookwarePOS automatically accesses the central Booksaurus database, making the buy back process **easy for both customers and cashiers**: customers simply bring their used books to the cashier to have them scanned. Once scanned, the cashier will see whether your store has requested the book, and if it has been requested, the cashier is able to **buy it back immediately**. If the textbook is not currently needed, customers can choose to be automatically notified if the book is requested in the future.

Booksaurus manages all the buy back "paperwork", making it **easy to move the books back onto the shelves**. As each book is purchased at POS, an entry is created for it in Receiving with the correct cost and quantity information. All buy-backs for the day are consolidated into one receiving memo and can all be **processed at the same time**. Once the Receiver has verified that the receiving quantity matches the actual number of books which have been bought back, a **single command** will put the used books into inventory, print the used book labels, and send the prices and PLUs to the POS.

The **seamless integration** of the Booksaurus process with existing store operations makes it the **easiest way to put more used books on your store shelves**, increasing sales and profits without a significant increase in labour.

Booksaurus is the used book solution your bookstore has been waiting for.
